

**Better**

A multi-flue chimney cap is a better alternative to installing multiple single flue caps on one chimney. Choosing a properly sized multi-flue chimney cap is mostly a matter of aesthetics.

The multi-flue chimney cap pictured at left is properly sized to cover both flues. The cap mounts to the chimney top, but is not flush to the edge of the chimney.

Aside from aesthetics, one concern with this installation is that water is shed off the cap directly onto the chimney crown.

The multi-flue chimney cap pictured at right is also properly sized to cover both flues. Again, the cap mounts to the chimney top, but is flush to the edge of the chimney creating a more uniform appearance. Water is shed off the cap and away from the chimney. At Hickory Mountain Chimney, we feel this is the best solution.
